Understanding Risks

Understanding Risk

AGENDA

Why does public understanding of risk matter?

WHEN WE ALL SAY

THIS ALL ENDS WHEN WE ALL SAY

RISKS OF DISAGREEING ABOUT RISKS

Risk Perceptions

Risk Perceptions

A STATE DAY BATE DA TA TA TA DA

Why does the public get risks "wrong"?

- Experts think that the public tend to overestimate or under-estimate many sources of risk
- The gap in expert and public risk perceptions of nuclear power prompted the development of risk perceptions as a field of study
- Is it just due to a lack of information?

Emotions v. reason?

SYSTEM 1 HEURISTIC THOUGHT

- Fast
- Automatic
- Effortless
- Associative

THE NEW YORK TIMES BESTSELLER THINKING, FAST and SLOW
DANIEL
KAHNEMAN
WINNER OF THE NOBEL PRIZE IN ECONOMICS "[A] masterpice This is one of the greatest and most engaging collections of insights into the human mind I have read." — WILLIAM EASTERLY. <i>Financial Times</i>

SYSTEM 2 SYSTEMATIC THOUGHT

- Slow
- Learned/controlled
- Effortful
- Rule-based

Risk Perceptions Poll

https://www.menti.com/oxf752h5g4

Factors influencing risk judgements

Risk judgements involve both reason and emotion

Characteristics of Risk that Influence Risk Perception

Dread Risk

- Perceived lack of control
- Involuntary
- Lethality
- Catastrophic potential
- Inequitable distribution of risks and benefits
- Impact on future generations
- Increasing

Familiarity & Exposure

- New, familiar, immediate, observable
- The number of people exposed to the risk source or activity

Experts' risk perceptions relate more closely to **mortality statistics**, while the general public tends to perceive risk based on **dread and how known or unknown the risk is**.

(Slovic et al. 1981, 1987)

Affect & Risk

power is a bad thing"

"Risk is bad"

"So nuclear power must be very risky"

"Since it's risky, it must not be beneficial"

Emotion & Risk

- Emotions are powerful and automatic and associated with action
- Fear and anger don't explain risk perceptions in themselves
- These emotions exert opposite influences on control and certainty which in turn affect behaviour.

Lerner, J.S., & Keltner, D. (2001). Fear, anger, and risk. *Journal of Personality and Social Psychology*, 81(1), 146-159.

Risk and Society

Identification and evaluation of risks are shaped by social factors

"Social amplification of risk " framework draws attention to the feedback loops between sources, channels, 'stations' and institutions

Amplification and attenuation

Renn O. Risk governance. Coping with uncertainty in a complex world. London: Earthscan; 2008.

For which risks are differences in risk perceptions likely to be widest?

Lack of transparency

Complexity

Uncertainty

Evolving science

Evolving uses

- In some domains, experts perceive high risks but do not seek to communicate these to the general public.
- In other domains, experts diverge widely among themselves in assessing risks.

Divergence between risk perception and action

What do individuals perceive to be the top risks?

"Greatest Source of Risk in Your Everyday Life" LRF World Risk Poll

13% 12% 10% 9% 7%

Road/traffic accidents/injuries

How do we find out how the public perceive risks? The Toolbox

SURVEYS

Local, regional/national, global

- National polling firms e.g. Pew
- LRF World Risk Poll, Edelman Trust Barometer, World Values Survey
- Online surveys: Qualtrics, PureProfile, YouGov

BIG DATA

- Internet search trend data: Google Trends
- Social media monitoring: Twitter, Wei Bo, Reddit, Facebook etc.: https://voyant-tools.org
- Smartphone-based data collection: https://ethicadata.com

"SMALL" DATA

PROS AND CONS OF SOCIAL MEDIA DATA

ADVANTAGES

- Volume lots of evidence
- Velocity high temporal resolution longitudinal data
- Rapid perception of messaging effectiveness and reaction duration in groups
- Variety possibility to triangulate between sources
- Veracity avoids problems of selfreporting
- Social media shapes opinion as well as reflecting it
- Effective targeted social marketing tool

DRAWBACKS

- Need to safeguard user information and feelings of privacy by:
 - Anonymising and aggregating data
 - Identify and stick to concrete use cases
- Need to pre-process social media data
- Pay attention to ambiguity & obfuscation in posts
- Disinformation, non-individual accounts
- Consider differences in platform use by different demographics to avoid bias

PROS AND CONS OF SMARTPHONE DATA

- Smartphone data: location, motion, environment sensors e.g. light, temperature, contact network, app usage
- Cross-analyse user data with other spatial data e.g. air pollution, water pollution, access to services, weather data
- Challenges in recruiting and retaining participants due to user fatigue and dropout
- Data feedback to users/"sentinels" to improve opt-in, compliance, and trigger behaviour change, enhances trust and transparency, user learning and empowerment
- Need to filter out irrelevant data and analyse data to get a high-level understanding significant time and skills required to process data

DESIGNING A DATA COLLECTION STRATEGY

- All methods have advantages and drawbacks
- Aim to develop a CROSS-PLATFORM STRATEGY
- Combine methods depending on:
 - Time-criticality
 - Differentiation among sub-populations
 - Budget etc.

Risk Communication

Risk Communication

XIX XX

XII XIX XII X

Who communicates risk and to whom?

Government officials and politicians Media Scientists and researchers Corporations and industry Public groups agencies and regulators

Purposes of risk communication

Risk Communication

Elements of risk communication content

Level of risk: how likely is it to happen

Population at risk

Severity of the consequences or harm

Actions to control the risk

Conveying Risks – What to Avoid

Misunderstood terms & indicators

Denominator neglect

Confusing visuals

Unhelpful comparisons

Deceptive framing

Risk metrics

"We had a 1 in a 100-year flood two years in a row – how can that be?"

Alternatives:

- Flood stage/ height
- Flood which has a 1 in a 100 chance of happening in any given year

Communicating an *increase* in risk

The third generation contraceptive pill "doubles the risk" of fatal thrombosis

10,000 additional abortions 30,000 additional conceptions

2nd generation pill: 1 in 7000 per year

3rd generation pill: 2 in 7000 per year

Breast Screening in Women

The benefits and harms of breast cancer screening of 1,000 women aged 50-70 without any symptoms

Breast Screening in Women

The benefits and harms of breast cancer screening of 1,000 women aged 50-70 without any symptoms

Without screening

58 will be diagnosed breast cancer

21 will die of breast cancer

37will be treated and survive their cancer

Due to screening, 5 lives will be saved but around 17 women will be diagnosed with cancers that would not have caused them any harm With screening

75 will be diagnosed breast cancer

16 will die of breast cancer

59 will be treated and survive their cancer

17 of the 59 will be overdiagnosed. These are cancers that wouldn't have caused any harm.

5 lives will be saved due to screening

Communicating both sides of the story: Fact Boxes

Statins for primary prevention of cardiovascular diseases

OCO HARDING CENTER FOR Numbers for people aged 40 years and older who either took a placebo or statins and were observed on average for 3 years (between 6 months and 6 years). They showed a higher risk of cardiovascular disease. However, they had not experienced a

Statins for primary prevention of cardiovascular diseases

OOO HARDING CENTER FOR **RISK**

Numbers for people aged 40 years and older who either took a placebo or statins and were observed on average for 3 years (between 6 months and 6 years). They showed a higher risk of cardiovascular disease. However, they had not experienced a cardiovascular event (e.g. heart attack) thus far.

100 people who took a	100 people who took
placebo	Statins
2	1
2	1
2	1
4	3
13	13
9	9
3	3
	100 people who took a placebo 2 2 2 4 13 9 3

*Adverse events were life-threatening, fatal, led to permanent disabilities, led to (prolonged) hospital stays, or were cancer diagnoses.

Short summary: Statins lowered the number of people who died from cardiovascular disease and who died overall. Heart attacks and stroke occurred less often. There was no difference in the number of adverse events experienced.

The Communications Medium

Risk communication as a two-way process

Audience

Experts

Communicating risk to policy-makers

- Investing in risk mitigation is often a difficult decision for political leaders to make.
 - Competing priorities
 - Complex, inter-connected risk landscape both problems and solutions cross borders
 - Public may not have a good understanding of the riskscape or the costs and effectiveness of actions
- Risk identification and assessment and assessment of the feasibility and effectiveness of mitigation options are *expert* judgements.
- Investment in mitigation is a *political* judgement.
- Risk advice to policy-makers needs BROKERS to:
 - Synthesize and interpret information
 - Present a compelling narrative framed in terms of the *values* of the decision-maker and affected groups
 - Honesty about types and extent of uncertainty
- Brokers need to speak the languages of science, policy and politics and have diplomatic skills.

Role of Trust

Role of Trust

XIX XXXX

Levels of Trust

Confidence in the individual communicator

Confidence in an organization at a specific time on a specific issue

Confidence in an organization based on past or overall performance

Generalised trust in institutions

Generalised Trust

Source: 2020 Edelman Trust Barometer https://www.edelman.com/trust/2020-trust-barometer

Trust in the Individual Communicator

Be trustworthy

Engage over the long-

Be competent and reliable

1.4.

Be honest

Weight public benefit over private benefit

The "Don't Look Up" Risk Communication Challenge

There is a massive "planet-killer" comet heading towards the earth. A respected scientist from a top university has entrusted you with this information. What do you do?

- What information do you seek to gather from the scientist, their team or other experts?
- Who is the priority audience to whom you try to communicate this information?
- What is the core message you try to convey?
- How will you frame the message?
- Which barriers do you think you might face when trying to get your message across?

Key points

Be clear about the goals of risk communication

Listen to your audience: understand the values, needs and constraints of affected groups

Map out a strategy: test, evaluate, recalibrate

The ultimate risk communicator: a scientist-diplomat-comms professional
