Digital Technologies to Disrupt Agricultural Finance

Agrikore : the African blockchain wallet for Agriculture

by

Bolaji Akinboro

Co-founder Cellulant &
Chief of Party- eWallet

PRESENTATION OUTLINE

1

About the e-wallet

2

The problems that the e-wallet solves at every layer

3

The architecture : How the system works

4

The e-wallet implementation

5

The reporting interfaces

6

The LATA program overview

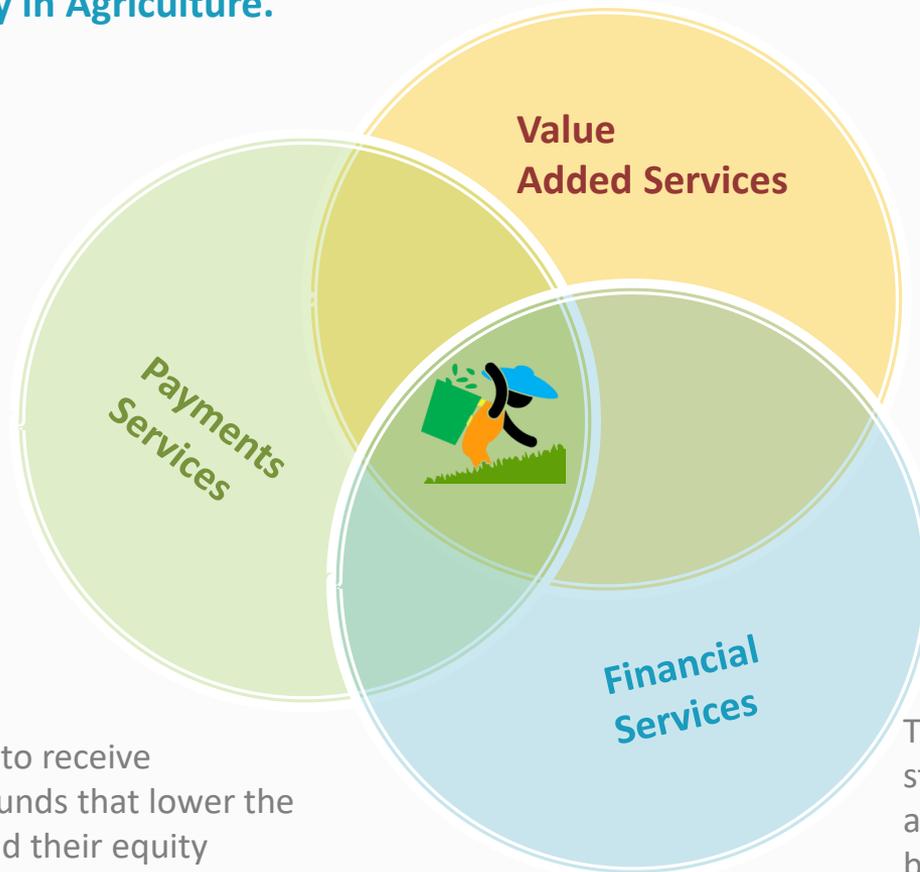

7

The results to date

ABOUT AGRIKORE (eWallet)

eService delivery in Agriculture.

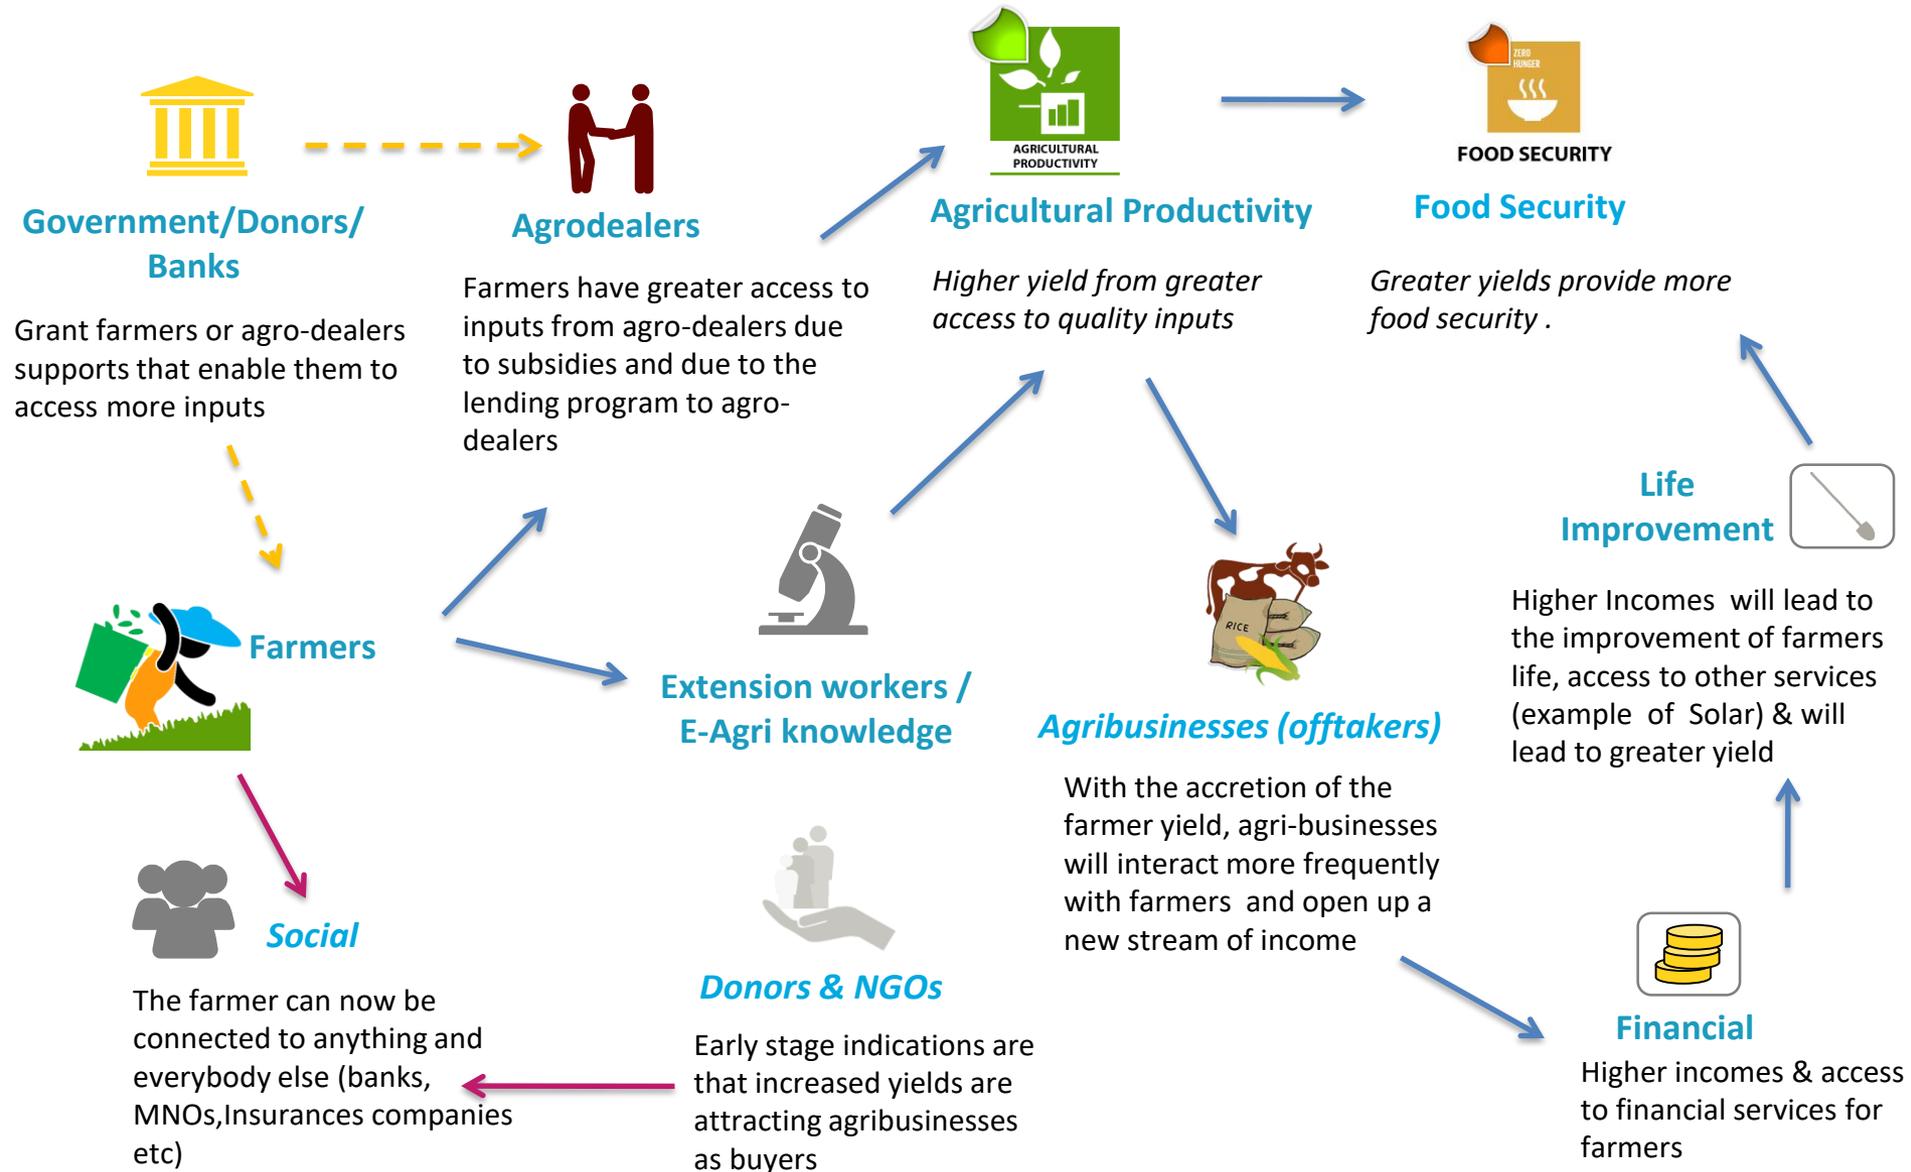

E- registration that enables farmers , services providers (agro-dealers, cluster agents, off-takers), financial institution to be visible to each other and connect.

The farmer is able to receive “price- support” funds that lower the price of inputs, load their equity contribution so that they can pay the agrodealer digitally via their e-wallet. They also receive the sales proceeds when they sell their produces onto this wallet

The banks are able to lend in a structured way to both agribusiness actors (agro-dealers) and to farmers because the platform handles the “KYC” component of the loan approval process and feeds information in agricultural credit risk guarantee operators

Direct benefits of the system to farmers and the spillover effect

Agrikore enables countries to create an “agriconomy” by enabling a SYSTEM rather than a ISSUE approach to national development

2

THE PROBLEMS

That the ewallet solves @ every layer

OVERVIEW OF PROBLEMS WITHIN THE AGRIC VALUE CHAIN

MARKETS>	INPUTS	PRODUCE	INSURANCE/ RISK	FINANCE	SECURITIES/ EXCHANGE	PUBLIC SECTOR
KEY PERSONS	1.Suppliers 2.Agro-Dealers	1.Off-Takers 2. Village Aggregators 3.Farmer	1.Insurance Companies 2.Risk Agency	1. Micro Finance Banks 2.Commercial Banks 3.Non-Bank Lender 4. Agent	1.Commodity Board 2.Commodity Buyer	1.Government 2.Donor
OFFERING	1.Farm Inputs	1.Warehousing & Market Access 2.Produce Aggregation at Farm Gate 3.Produce	1.Process Integrity – Performance guarantee/De-Risking	Liquidity	1.Physical produce clearance from the market 2.Market-Maker Trigger	1.Oversight & regulation 2.Liquidty(Subsidy)
PROBLEM	1.Lack of demand information/No Demand mapping 2.Logistics Risk 3.Liquidity	1.No pre-knowledge of source, location and volume of ready supply – affects cash-flow forecasting 2. Liquidity	1.Lack of understanding/u ptake of insurance products	1.Sector unorganized for lending. Limited KYC	1.Inability to make specific supply demand through a standardized system	Lack of sector transparency and organization
CELLULANT BLOCKCHAIN SOLUTION	1.Ability to see guaranteed demand from farmer	1.Ability to see guaranteed supply from farmer or aggregator	1.Ability to play insurance role within a structured ecosystem	1.Transparent monitoring of all actors/borrowers	1.Monitoring ledger	1.Monitoring ledger

HOW THE SOLUTION WORKS	<p>a.Input price information fed into the system</p> <p>b.Farmer indicates demand by funding account in advance & purchasing insurance</p> <p>c.Suppliers/AGD can see demand & purchases insurance against risk of default.</p>	<p>a.Farmer able to indicate projected produce volume in advance. Can also indicate expected/future price.</p> <p>b. VA able to indicate aggregation capacity and pre-identified produce delivery volume. Can also indicate expected/future price</p> <p>c.Use information gathered to signal to commodity buyer/exchange forecasted quantity of goods available at a set period of time. Knowing the farmer/VA source can help assimilate produce quality & type</p>	<p>a.Issues performance bond on behalf of input supplier and farmer</p> <p>b.Issues insurance instruments between financial borrower and financier</p>	<p>a.If inject liquidity to an actor, can monitor performance/transactions of actors so there is transparency of market behaviors and actions</p>	<p>a.Can place specific commodity quantity and price on ledger</p> <p>b.Monitor accumulation of the produce as it is coming into the system</p> <p>c.Monitor fluctuations in commodity prices</p>	<p>a.Insight into behavior of all ecosystem actors for regulatory purposes</p>
SOURCE OF VALUE	1.Margins	1.Margin 2.Commission	1.Premium	1.Interest	1.Capital Gains	1.Taxes 2.National Food Supply
INSTRUMENT OF VALUE VALIDATION	1.Advisory Note	1.Contract Instrument 2.Goods Receipt Note (GRN)	1.Insurance Note	1.Loan Records	1.Spot/Futures Contract	1.Tax payment
ORIGINATOR OF VALUE	Supplier	Farmer	Off-Taker	Corporate Commodity Buyer	Corporate Commodity Buyer	

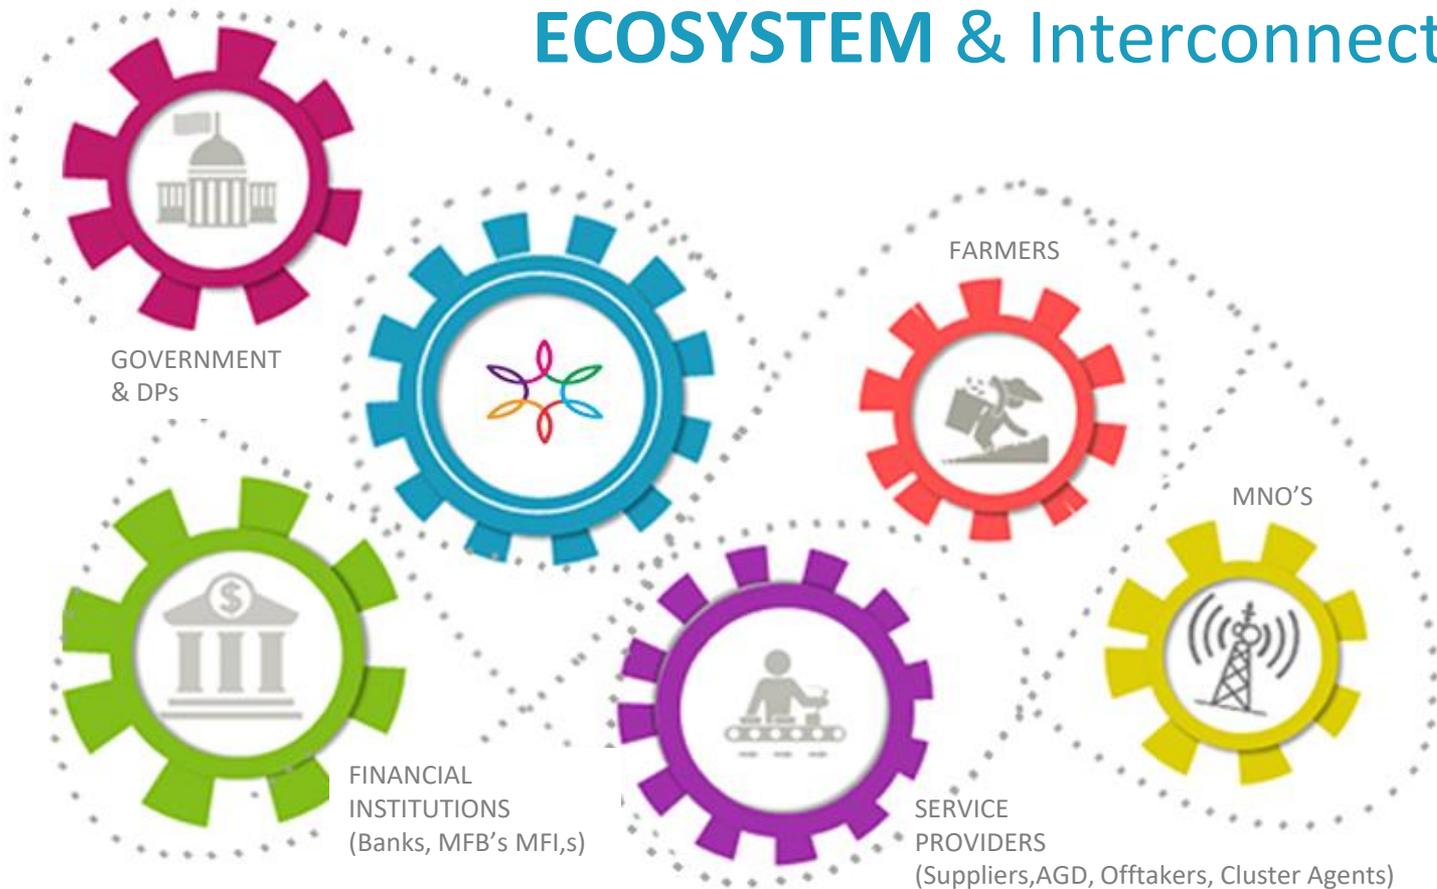

3

THE ARCHITECTURE

How the system works

- The Ecosystem
- The different actors and their roles
- Bringing markets to farmers

The e-wallet brings major stakeholders together into an **ECOSYSTEM** & Interconnects them

The ecosystem stakeholders and their roles

BACK-BONE OPERATORS

Government & DPs

- Formulate policies,
- Regulate & grant subsidies when necessary

Financial Institutions (Banks, MFBs, MFIs)

- Issue loans & credit guarantees

MNO's

- Provide access to the core network for communication channels & to their mobile money networks
- Act as collection agents/ financial inclusion enablers

SERVICE PROVIDERS

Suppliers

- Inject inputs into the value chain & set up the distribution network

Cluster agents

- Organize farmers
- Conduct extension activities

AGD

- Provides the last mile access to inputs, financial services & output aggregation

Offtakers

- Buy produce of the farmers

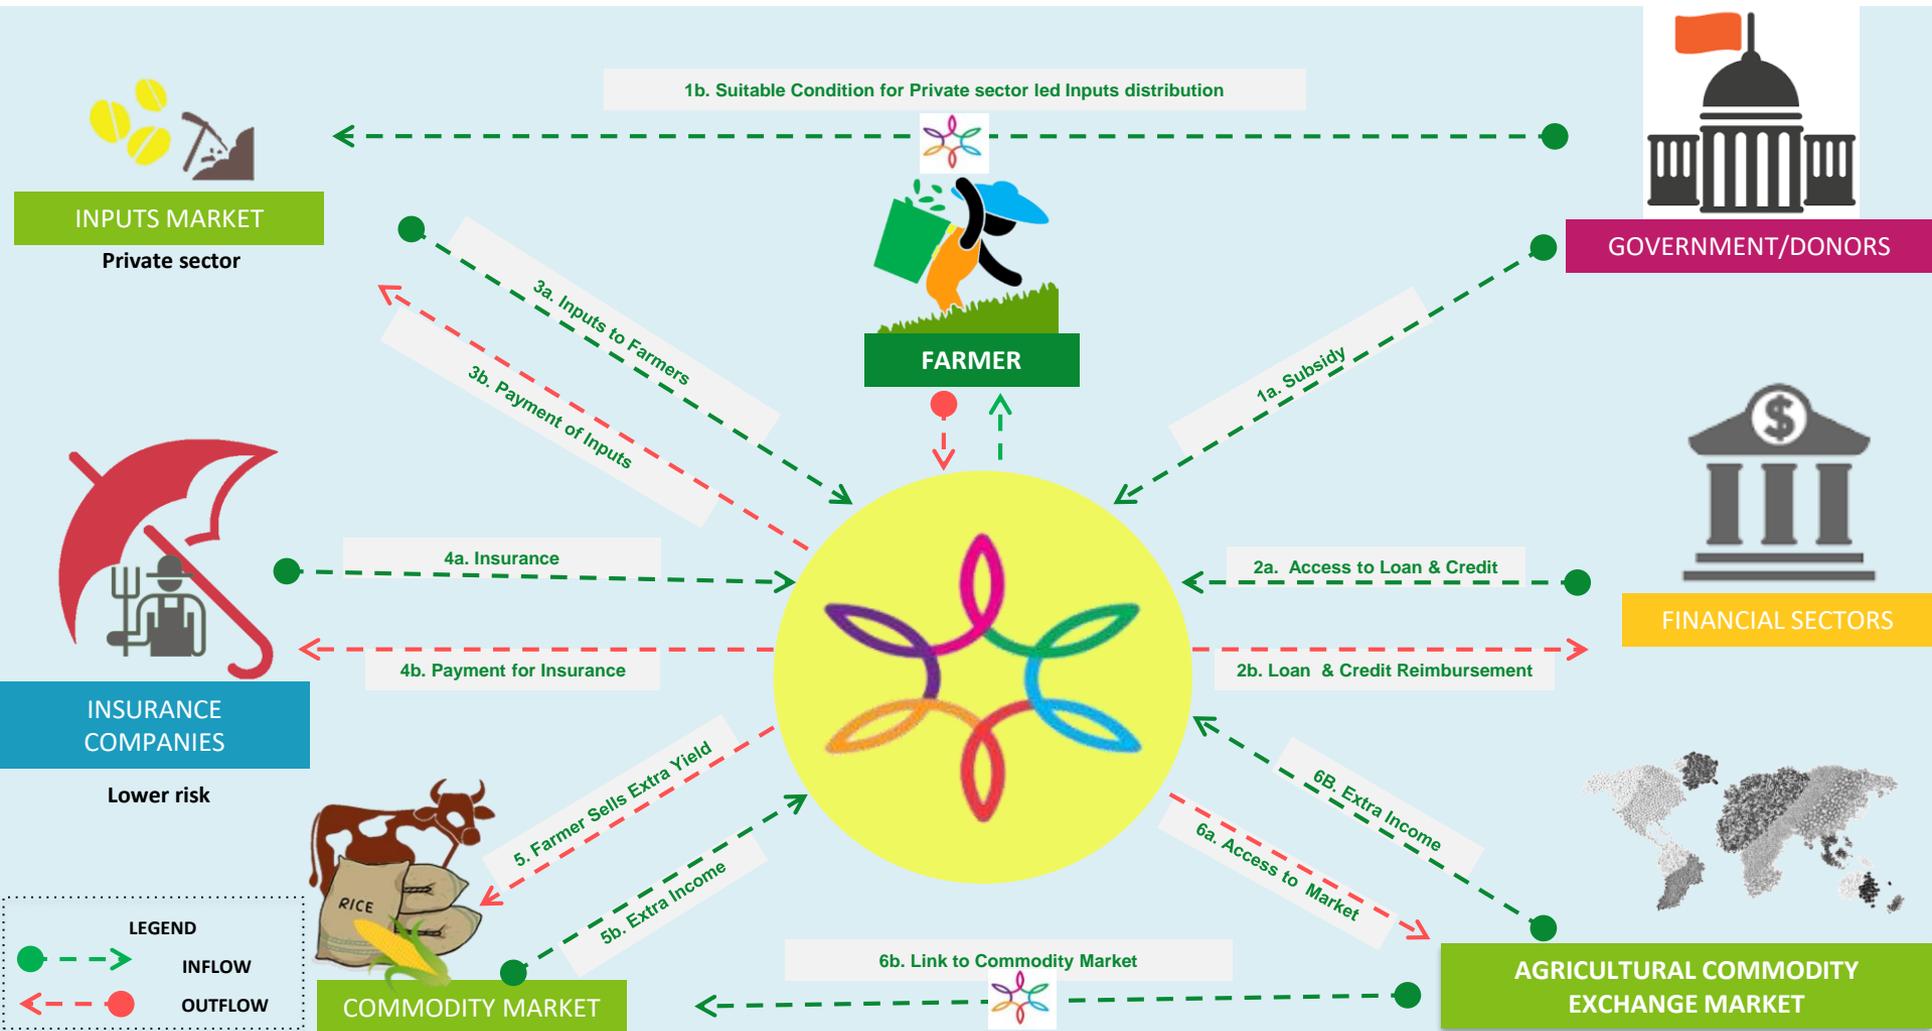

END USERS

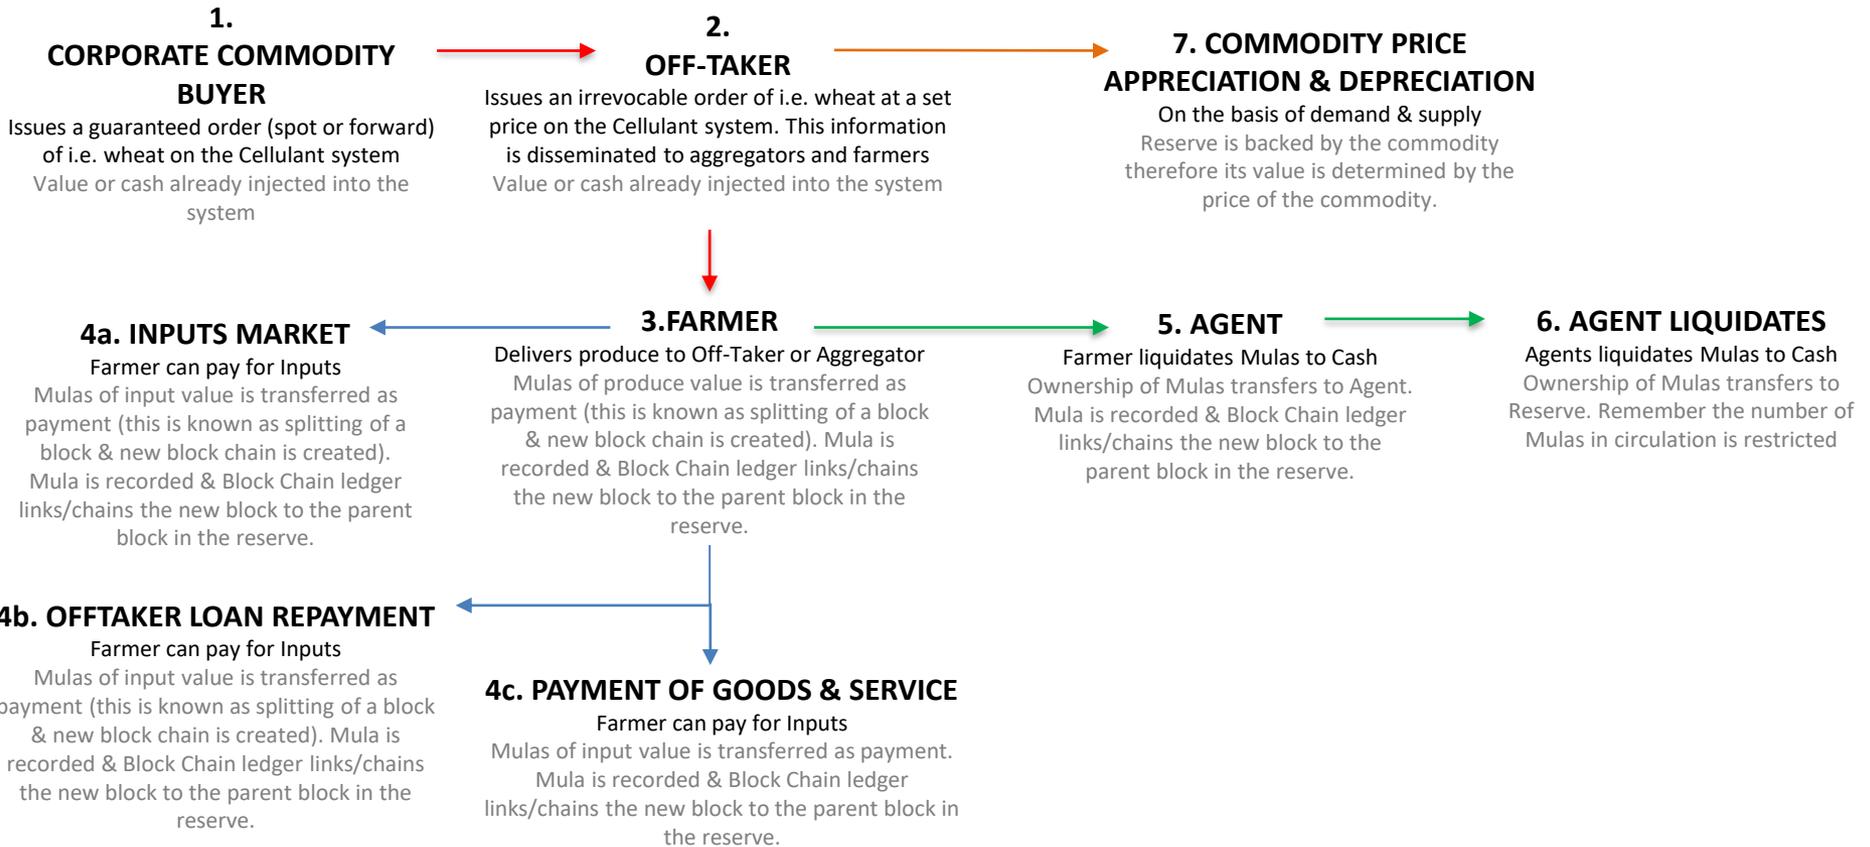

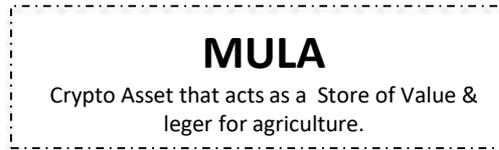

Farmers Cooperatives Value Chains

Users of the ecosystem services

The Agrikore (e-wallet) platform brings all markets together for the farmer

What the actors do within the ecosystem ?

PULLING IT ALL TOGETHER

1

CASH BACKED RESERVE
CELLULANT
Initial Owner & Underwriter

2

BLOCK CHAIN AS A LEDGER/UNIT OF ACCOUNT
AGRICULTURE ACTORS (FMCG, CORPORATE
COMMODITY BUYERS, OFFTAKERS)
i. Commodity Orders Can Be Placed
ii. Interactions/Transactions by can be Monitored
iii. Appreciations/Depreciations can be Monitored

3

MULA AS A UNIT OF STORAGE/INVESTMENT
DERIVATIVE MULA
Value of Mula derived from an underlying financial asset i.e. commodity, interest rates, market index. For example, Forward & Futures contracts are also derivatives, therefore, one can invest cash into the system for speculative or hedging purposes to take advantage of changes in the value of the underlying commodity. This Mula only becomes a medium of exchange when the holder decides to make it a liquid/fungible Mula. An e-warehouse receipt is also a type of derivate Mula as it is a contract backed by an underlying asset. We are the ones to set the rules to govern this.

C

CELLULANT – THE MINER GETS THE TRANSACTION FEE
1.Bitcoin – Computerized Miners
2. Visa/Mastercard – Mine transfers - % fee
3. Cellulant – Mines Mula Transfers - % fee

a

WHAT IS THE CELLULANT BLOCKCHAIN
1. Published Reserve
2. Private Ledger
3. Reserve Backed
4. Liquid (Mula to Naira)
5. Focused on an Actual Industry

b

HOW DOES CELLULANT MAKE MONEY
1. Transfers i.e. as Mula holders move from different stages of the Mula, transfer charges are placed
2. Exchange Rate Spreads
3. Reserve Appreciations
4. Ledger Request Placements
5. Contract Spreads

4

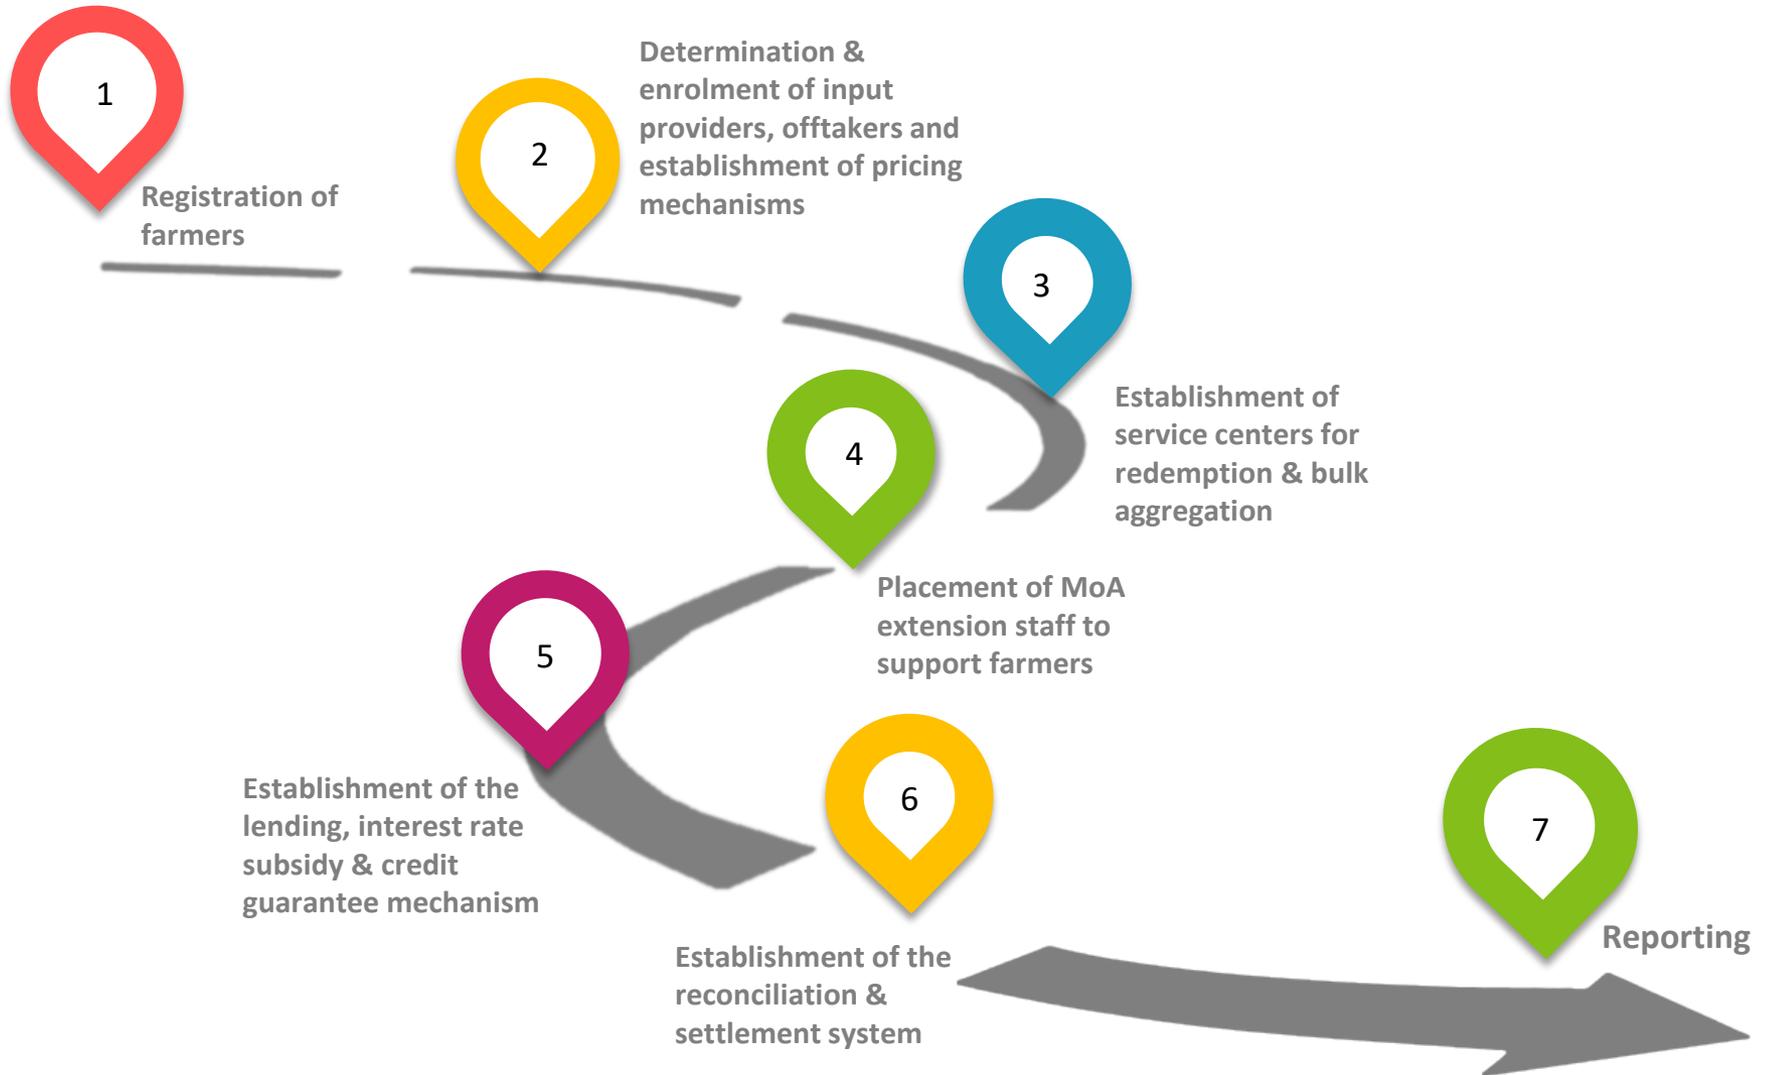

MULA AS A UNIT OF CURRENCY
LIQUID/FUNGIBLE MULA
Mula at this stage can be liquidated to cash by the holder. If held in Mulas, this Mula can be used as a medium of exchange. This is possible because of the growing acceptance of the Mula by businesses and individuals

4

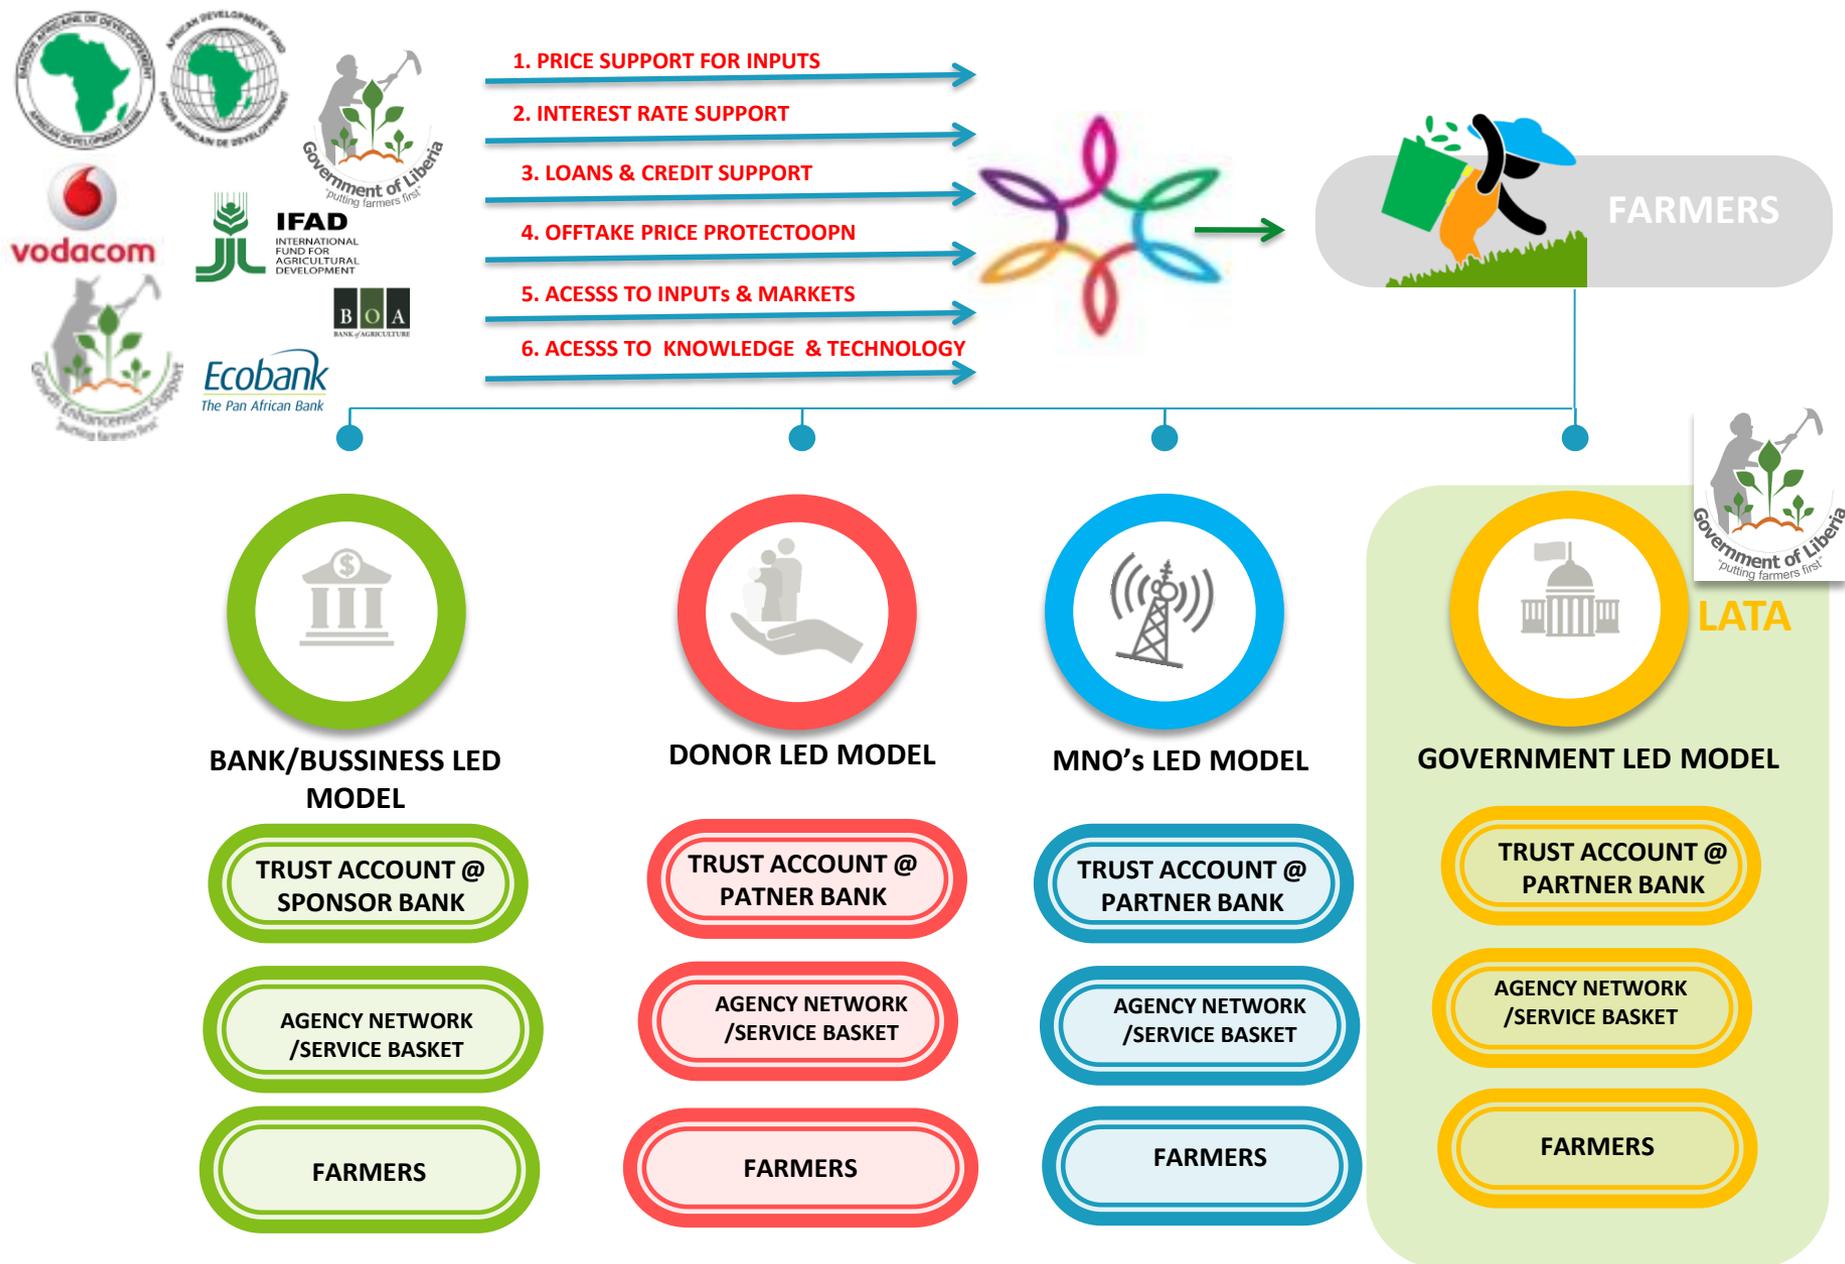

THE E-WALLET IMPLEMENTATION

- The process
- Implementation models

7-step process for an effective implementation of the e-wallet platform in a country.

WHAT & HOW DOES E-WALLET DELIVER TO FARMERS?

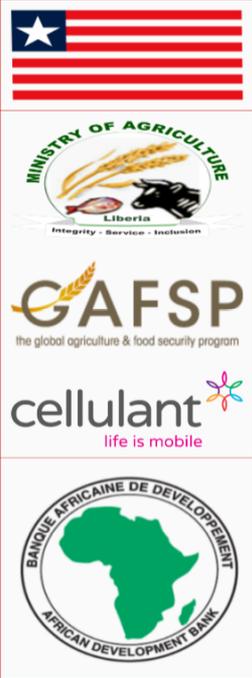

4

THE REPORTING INTERFACES

- Dashboard
- KYC database
- Reporting and settlement
- Redemption process

SERVICE DELIVERY

VALUE CHAIN

- Upland /Low land rice
- Cassava

WAREHOUSE & LOGISTICS HUBS

- 16 primary distribution points,
- 60 secondary distribution points,
- 162 truck trips required

FRAMEWORK TEST RESULTS

- 6 sites 2. 15days of activity / site
- 2688 farmers collected full package out of 3000 redeemed.

GOALS

FARMERS: 50,000 – 65,000 all sites included, (10,000 Cassava Farmers)

FERTILIZER INPUT PER FARMER

- NPK (15:15:15 – 1 Bag – 50kg)
- UREA – 25KG – 1 Bag

SEEDS PER FARMER

- Upland Rice– 25kg
- Lowland Rice – 10kg

STEMS PER FARMER

- Cassava – 20 Bundles (1000 Stems)

INVESTMENT

\$ 9 MILLION

AGRIC IMPACT: Additional Extra 1Metric Tonne of Output Per Farmer = 65,000 Metric Tonne of Output
ECONOMIC IMPACT = \$13million
