REASON FOR TODAY'S CALL:
 -Hot water takes a long time to come out of kitchen faucet. -Staining around lavatory faucet.

DESCRIPTION OF WORK PERFORMED:
 -I tested the faucet and it did take quite a while to get hot water out of it at first but if once the hot water has been run through the faucet you turn the faucet back on shortly thereafter the water is still hot. The cartridge was reported as being the likely culprit by the building's plumber so I installed a new one. Douglas will give the faucet some time before it's next use and see if this has helped the situation. -The shut off valves under the sink (connected to the faucet) were starting to fail. I repaired these shut off valves by replacing all the moving parts within them (washers, stems, packing, packing nuts, and handles).
