PHONE 604.618.4313		EMAIL sunnynn212@gmail.com	

REASON FOR TODAY'S CALL:

1. The flush in our dual flush toilet is now not filling up. The water enters the toilet bowl immediately and doesn't fill inside the tank. I am attaching photos. It was working fine and then I had a cleaning service and right after this happened. So I am not sure if they pushed on some parts or moved something. Right now I have closed the water intake hose. Otherwise the water will just come to the tank and immediately drain to the bowl. Could you please come by and have a look. 2. Also I thought while this is going on, to have you take a look at the sink in the other bathroom. It has been very poor at draining. We have tried rounds and rounds of draino but there seems to be some kind of growth inside. Event hough we clean the surfaces we always find some gunky growth around the drain. I was hoping if you have a way to clear out the pipe to help with the water not pooling.

DESCRIPTION OF WORK PERFORMED:

ENSUITE BATHROOM:-The bracket that secures the push buttons to the tank was cracked and a piece of this bracket was stuck under the flushvalve assembly plunger. I removed this piece of plastic and tested by flushing the toilet multiple times. GUEST BATHROOM: I removed gunk from the top of the lavatory drain and tested by filling and draining the sink multiple times.

QTY.	CODE	DESCRIPTION	UNIT PRICE	PRICE
