REASON FOR TODAY'S CALL:

"toilet water shut off valve doesnt completely shut off and leaks a bit when opening and closing, toilet is continuously running the floater doesnt stop toilet from filling. I recently replaced this, it worked for awhile and now the toilet is always filling again. I think the water pressure is too high for the toilet."

DESCRIPTION OF WORK PERFORMED:

-shut down main water and repaired shut off valve(replaced stem, packing, washer, and handle) for toilet in master bathroom. -replaced fillvalve in the toilet in master bedroom. -replaced the pressure reducing valve on the toilet supply as it was leaking.

TECHNICIAN RECOMMENDATIONS:

-when I re pressurized the main water I noticed a small leak coming from a backflip preventer on the heating system. I suggested having the heating system inspected by Montalbano Plumbing Services.
