REASON FOR TODAY'S CALL:

"I have two toilets in my unit and one of them is not flushing very well and gets clogged every once in a while. Last night the other toilet (the good one) is clogged so bad that nothing got drained out for more than 2 hours. I was able to use a plunger to clear the problem but would like to have this checked out to see why this is an ongoing issue."

DESCRIPTION OF WORK PERFORMED:

The fillvalve in the master toilet was not functioning properly, not allowing the proper amount of water per flush. I replaced the fillvalve and supply line.
