REASON FOR TODAY'S CALL:

Two separate issues although kitchen faucet is the priority. 1. Kitchen faucet hose is leaking and needs to be replaced. It's a black Kohler faucet/hose. 2. Bathtub showerhead has very little water pressure because the "diverter" doesn't seem to work and most of the water goes through the tub faucet.

DESCRIPTION OF WORK PERFORMED:

---Oct21: I delivered and installed the new kitchen faucet spray hose. ---Oct26: I installed a new tub spout and tested.

TECHNICIAN RECOMMENDATIONS:

When I removed the old spout I found the the copper line coming through the tile for the spout was slightly damaged. I silicone around the space between the copper and the tile in the case that the copper line leaks it will visibly leak into the tub and not in the wall. If water is noticed leaking from the back of the spout into the tub, some tile may have to be removed to accomodate repair to the copper line.
