REASON FOR TODAY'S CALL:

-replace basket strainer. -kitchen faucet low hot water pressure. shut off valves under sink not fully turning water off. #if not there concierge will grant access.

DESCRIPTION OF WORK PERFORMED:

-I replaced the right side basket strainer with new and tested by filling and draining the sink. -I repaired the faulty shut off valves under the kitchen sink by replacing the washers, stems, packing, packing nuts, and handles. I then flushed out the hot supply line leading to the kitchen faucet but the hot water pressure coming through the faucet is still much lower than the cold side. It seems as though the hot water pressure is lower throughout the unit. This is likely an issue with the Hot water PRV in the building.
