REASON FOR TODAY'S CALL:
My garburator is not working and my toilet is leaking

DESCRIPTION OF WORK PERFORMED:
-I removed a dozen small stones from the garburator grinding chamber and tested by filling and draining the sink while running the gaburator. -The toilet flapper was slightly warped allowing water to slowly trickle from the tank into the bowl, I replaced the flapper with new. Tim mentioned that the tank bolts had quite a bit of buildup on them. When I removed the buildup on the tank bolts I noticed the heads of the bolts were starting to breakdown. I removed the tank, installed the customer supplied tank gasket & tank bolts, and reinstalled the tank with a new supply line. Tested and in good working order.
