REASON FOR TODAY'S CALL:  
Leaky kitchen faucet - water dripping under sink

DESCRIPTION OF WORK PERFORMED:  
-The leak from the faucet was coming from the connection between the spray head and spray hose. I tightened this connection and tested. -While onsite Chris mentioned that the dishes coming out of the dishwasher after a wash were sometimes coming out with bits of food stuck on them. He was wondering if it could be caused by the garburator. The dishwasher drain hose is run up as high as it can go and secured to the underside of the countertop, this is the correct way to run it and would make it very difficult for any backup to occur from the garburator to the dishwasher. I took a look in the dishwasher and noticed the dirty dishes that were in the washer had a lot off food stuck to them. I suggested that they rinse their dirty dishes more thoroughly before placing them in the dishwasher.
