REASON FOR TODAY'S CALL:
waterline burst under kitchen sink

DESCRIPTION OF WORK PERFORMED:
The braided stainless steal cold supply line to the kitchen faucet burst, causing water to flood the cabinet and out into the kitchen/living room and into the bedroom. The supply line was covered in rust, there is also rust forming on all metal under the sink, stainless or not. I replaced both the Hot & Cold supply lines and tested. (I left both of the original supply lines in a plastic bag under the kitchen sink and informed the tenant that the insurance company may want to see them)

TECHNICIAN RECOMMENDATIONS:
A restoration company will have to be called in to asses the damage and make the necessary repairs. While the restoration company is onsite I suggest they remove all rusty non stainless steal metal from under the sink and clean the rust off of anything stainless steal.
