REASON FOR TODAY'S CALL:
 bathtub faucet is not switching shower shower diverter is broken when i turn water on it is coming down over the wall

DESCRIPTION OF WORK PERFORMED:
 -I removed the shower valve handle & trim and found that the diverter spool had worked itself completely loose from the valve body. When the water was activated it would spray right out behind the trim. I replaced the diverter spool with new and tested by running the water for 10 minutes while periodically switching between the tub spout and the shower head. No other sign of leaking were noticed. I reinstalled the trim and handle and tested the diverter handle. All in good working order.
