REASON FOR TODAY'S CALL:

1. Rusted garburator needs to be removed, (causing back up). 2. Kitchen faucet with little water flow, does not seem to be a water pressure issue. May need new faucet.

DESCRIPTION OF WORK PERFORMED:

---Kitchen Faucet: The shut off valves under the sink were breaking down, causing bits of rubber to clog up the spray hose and head. I was able to remove this debris and get the pressure back to normal but during testing noticed that the water sprays out of the head erratically. I repaired the H&C shut off valves under the sink by replacing the washers, stems, packing, packing nuts, and handles, and installed the new customer supplied faucet. ---Garburator: I removed the garburator, installed a basket strainer in its place, and re-piped the ABS drainage. Tested by filling and draining both sides of the sink multiple times.
