REASON FOR TODAY'S CALL:

I rent out the property and the renters advised me that the bathroom faucet is dripping. He turned off water and says still dripping. he thinks its a cartridge issue. The faucet is a Delta Lahara basin faucet. renter says there is a small residue of water under the sink also when he opens cupboard. Need a quote for the drip fix including cartridge part. Much thanks

DESCRIPTION OF WORK PERFORMED:

-I repaired the dripping faucet by replacing the Hot & Cold cartridges, seats, and springs. -The leak under the sink was coming from the nut that secures the stopper lever in place. I removed the nut and found that the gaskets within the mechanical drain were installed backwards. I reinstalled the gaskets, lift rod, nut, and stopper and tested. No leaks present. During testing I noticed that the sink was draining very slow. I cleared hair and sludge from the drain and tested again by filling and draining the sink multiple times. It is now flowing freely with no sign of leaking.
