REASON FOR TODAY'S CALL:  
 No water pressure in the kitchen sink taps Toilet not flushing correctly, running constantly

DESCRIPTION OF WORK PERFORMED:  
 ---Kitchen Faucet: The Hot & Cold shut off valves under the sink (connected to the kitchen faucet) were breaking down, causing bits of rubber to clog up the faucet spray hose adaptor. I repaired these valves by replacing the washers, stems, packing, packing nuts, and handles. I then flushed debris out of the adaptor. The pressure is much better. ---Toilet: The flapper was warped allowing water to constantly trickle through the bowl. I replaced this flapper and tested. The toilet is flushing normally but the Fill Valve does take longer than normal to fill the tank after a flush. To rectify this a new Fill Valve would have to be ordered from Kohler.
