REASON FOR TODAY'S CALL:
Water leakage in kitchen, possibly a dishwasher.

DESCRIPTION OF WORK PERFORMED:
-When I arrived onsite the owner mentioned she hadn't used the dishwasher since the leak was reported in the unit below, however the sink had been used. The water supply to the dishwasher was on and I could see no signs of leaking from the supply line. The area under the dishwasher and island cabinets were completely dry. I ran the dishwasher through a cycle and once the machine started to fill with water we could see water dripping onto the floor from the back of the machine where the drain hose comes through the enclosure. -I soaked up the water that leaked out onto the floor and turned the water supply off to mitigate the chances of any further leaking. -I also tested the sink and faucet by filling and draining the sink while running the garburator, no leaks where detected from the faucet, drainage, or garburator.
