**REASON FOR TODAY'S CALL:**

1. My toilet does not flush properly. The flapper does not return to it's original position & then the water tank does not refill. 2. Last time I used my dishwasher, there was water leaking out all over underneath the kitchen sink.

**DESCRIPTION OF WORK PERFORMED:**

-The garburator was leaking from cracks in the housing. I replaced the garburator with new and tested by filling and draining both sides of the sink multiple times while running the garburator. I also ran the garburator through a short fill & drain cycle. -I replaced the toilet FillValve, flapper, and supply line.
