REASON FOR TODAY'S CALL:

The toilet continues to run after flushing occasionally. We have to take the lid of the tank off and play with the valve to have the tank fill up... not every time but enough that we want it fixed.

DESCRIPTION OF WORK PERFORMED:

I replaced the mechanical portion of the FillValve and during testing noticed there was a small amount of water seeping out of the tank bolts. I removed the tank, installed a new tank to bowl gasket and reinstalled with a new braided supply line. I also replaced the flushvalve gasket as the original one was starting to bubble.
